

A. Sensitivity at 4.0 log2FC**B. CLR Attenuation (~75%)****C. Recommendations****KEY RECOMMENDATIONS**

1. Use $q < 0.10$ for LinDA (NOT $q < 0.05$)
2. LinDA needs $>8x$ fold change to detect anything
3. For discovery: Use ZINB/Hurdle (83% sensitivity, ~25% FDR)
4. For confirmation: Use LinDA (39% sensitivity, 12.5% FDR)
5. CLR attenuates by ~75% (effect sizes not interpretable)
